Participant	023	
	Yes	No
Do you or have you had a history of migraine headaches?	☒	☐
Do you or have you had a history of claustrophobia?	☐	☒
Do you or have you had a history of frequent or severe motion sickness?	☐	☒
Do you or have you had a history of any health problems (e.g., seizures, diabetes, heart problems, vertigo) that affect your ability to drive?	☐	☒
If you are a female, are you or is there a possibility that you might be pregnant?	☐	☒

Demographics

1. What is your race/ethnicity?	☒ White / Caucasian
2. What is your gender?	☒ Male
3. How old are you?	34
4. What is the highest level of education you have completed?	☒ High school graduate of GED
5. Which option best describes your current home?	☒ It is owned or being bought by you or someone in household.
6. How do you pay for healthcare?	☒ Self-pay, out of pocket
8. Which best corresponds to your current work situation?	☒ Working full time.
9. What is your combined family income for the past 12 months (from all sources)	☒ \$20,000- \$49,999

Exit Interview

1. Which option describes your current home?	☒ It is owned or being bought by you or someone in household
2. How do you pay for healthcare?	☒ Self-pay, out of pocket
3. Which best corresponds to your current work situation?	☒ Not working or looking for work.
1. You experienced Cognitive Behavioral Therapy and Heart Rate Variance interventions in virtual, augmented, and mixed realities. How would you describe your experiences with each of those headsets?	AR - good experience, still saw a lot of surroundings, had mixed feelings about this specific intervention, but believes that it was good overall. enjoyed the least out of the other interventions. VR - enjoyed the most. felt fully immersed in experience and felt like the counselor from the CBT interventions was right in front of him. notes that pt got lost in this experience. MR: enjoyed as well and notes that his senses were very heightened during this experience. still aware of surroundings, but felt as if there were somehow two different realities.
2. Do you think these types of technologies have a place in OUD treatment and management? If YES, how? If NO, why not?	yes, especially VR. believes these technologies can get someone out of reality and be fully immersed in other tasks. feels that cravings would definitely be eased with these interventions, especially with the one on one CBT counselor. notes that these technologies would be creating a beneficial distraction if they were utilized in treatment.
3. How would you describe the iPAL application, in terms of a cravings management tool?	believes that it is a great tool if someone were to answer truthfully. notes that it could be a little more detailed and ask more questions. pt notes that they personally never had high cravings when completing the questionnaire and notes that if they maybe had higher cravings, it would be helpful to ask more in depth questions about the nature of the cravings.
4. How would you describe the interventions (CBT, HRV)? Were the interventions appropriate for the intensity level and triggers you reported?	CBT - felt that intervention was calming and perfect for the level of cravings pt reported. felt like the individual in the video was sympathizing with pt even though she wasn't there. noted that pt felt like the videos were a little too short. HRV - loved the breathing exercises and found them very beneficial. helped pt to recenter themselves and found this to be a great tool. not too long or too short.
5. Do you think the iPAL app, or similar digital interventions delivered via phone should be integrated into OUD treatment plans? If YES, how and in what capacity or role? if NO, why not?	yes - creates a good distraction and feels that this could be used outside of the doctor office setting. anytime cravings are bad for an individual and they are unable to get to a doctor's or therapist's office due to barriers, it would be great to utilize.
6. If iPAL or a similar app was available, would you download the app and incorporate it into your OUD treatment and management plan?	yes - could envision self utilizing 4x/week at least and if not, everyday. feels that every individual always needs to center and calm self.
